

Acceptance Letter

Paper Title: ML Based Smart Soldier Health Monitoring and Early Risk Prediction System

Article ID: ICIMIA - 544

Authors: M A Seshasaai, Sai Janavi P H, K Bala Manikanta, Kamaleshwaran M, Lakshana R, S Vijayalakshmi

Dear Authors

On behalf of the Conference committee, we would like to congratulate you on your article to the **ICIMIA 2026** IEEE Conference, which will be held from **5-7, October 2026** at **Sasurie College of Engineering**, Vijayamangalam, Tirupur Dt, Tamil Nadu, India. You have been selected to deliver your presentation at the 5th International Conference on Innovative mechanisms for Industry Applications - ICIMIA 2026.

As a result of the review and results, we are pleased inform that you can now submit the camera-ready paper for inclusion into the 5th ICIMIA 2026 conference proceedings. We appreciate if you could send the final version of your research paper at your earliest convenience, in order to ensure the timely publication. When submitting your final paper, please highlight the changes made according to the review comments.

With Regards,

Prof. T. Manickam
Conference Chair

Proceedings by

Review Comments-1

1. All tables should be appropriately cited in the manuscript text. The Conclusion and Future Work sections should be combined into a single coherent paragraph to maintain proper structural flow. Additionally, the manuscript should be thoroughly edited to ensure proper English usage, grammar, punctuation, spelling, and overall academic writing style.
2. Clearly explain how the collected dataset and logically generated synthetic samples were combined, validated, and balanced to avoid model bias and overfitting.
3. Justify the reported 99.56% accuracy by including additional evaluation metrics such as precision, recall, F1-score, ROC-AUC, and cross-validation results.
4. Include real-world field experiments under actual desert and high-altitude deployment conditions instead of relying mainly on simulated environmental scenarios.
5. Evaluate communication reliability by reporting LoRa packet delivery ratio, transmission range, packet loss, and energy consumption under different operating conditions.
6. Discuss the limitations of using an unencrypted LoRa communication channel and experimentally assess the impact of security mechanisms on system performance.

Review Comments- 2

1. Real soldier data validation is missing.
2. Class-wise sample distribution is not reported.
3. Real-world field validation is not demonstrated.
4. Comparison with recent ML-based studies is limited.
5. Power consumption analysis is not provided.
