ICSCSA-231	Decision Tree Based Machine Learning Framework for Early Risk Prediction in Soldier Health Monitoring Using IoT and LoRa Communication	M A Seshasaai, Sai Janavi P H, K Bala Manikanta, Kamaleshwaran M, Lakshana R, S Vijayalakshmi

Dear Authors,

On behalf of the Conference Committee, we are pleased to inform you that your article has been accepted for presentation and publication at the **6th International Conference on Soft Computing for Security Applications (ICSCSA-2026)**, scheduled to be held from **19-21, August 2026** at **Dhirajlal Gandhi College of Technology**, Salem, Tamil Nadu, India.

Following the completion of the review process, you are hereby invited to submit the camera-ready version of your manuscript for inclusion in the official ICSCSA 2026 Proceedings.

We kindly request you to submit the final version of your paper at your earliest convenience to ensure timely publication. Please ensure that all modifications made in accordance with the reviewers' comments are appropriately incorporated and clearly highlighted in the revised manuscript.

Yours Sincerely,

A green handwritten signature, likely of Dr. J. Vijayanthimala, written in a cursive style.

Dr. J. Vijayanthimala
Conference Chair
ICSCSA 2026

Conference Review Comments

Reviewer comments-1

1. Decision Tree model is trained using both real and logically generated data, but the data generation process and its impact on prediction reliability should be explained more clearly.
2. Model is evaluated mainly using accuracy, while additional metrics such as ROC-AUC, Matthews Correlation Coefficient, and class-wise performance would provide a more comprehensive evaluation.
3. Cross-validation reports a mean accuracy of 85.09%, whereas the final model accuracy is 99.56%; this significant difference should be explained to avoid confusion regarding model performance.
4. Communication performance of the LoRa network is not experimentally evaluated using metrics such as transmission range, packet loss, latency, and energy consumption under real deployment conditions.
5. System is validated using a standalone prototype, but testing with wearable deployment on soldiers or realistic field environments would better demonstrate its practical applicability.
6. Table I should be cited inside the article content (for example, “As shown in fig. 1, Figure 2 shows, etc.”).

Reviewer comments-2

1. Wearable implementation needs consideration.
2. Why was the Decision Tree selected?
3. Security discussion needs improvement.
4. Decision Tree selection needs justification.
5. Power consumption needs detailed analysis.
